PROJECT

Course: Web Technology
Title: Restaurant Website Development
(Ali's Burger)

Rzeszow 2024

Introduction:

It is a Web application for only the Customers whose wants to order online or make a reservation. Customers can also see in the interface : the history,menu, comment of other Customer and photos of Chef's.

The application is built using HTML(one is provided for restaurant,second is provided an order form and third is provided for contact form.Additionally, I've provided a CSS stylesheet that styles these HTML elements.)

The restaurant website HTML contains various sections such as header,cards,history,black block,dishes,menu,comments,gallery,chefs,and footer,Each section has its corresponding CSS styles to control layout,colors,fonts,and responsiveness.

The order form HTML includes input fields for the user to fill out their name,telephone number, and address,along with contact information such as phone number,email,and address.

The contact form HTML is similar to the order form but is focused on sending messages.It includes input fields for the user's name,email,and message,along with contact information.

All HTML documents reference the same CSS file for styling.

Navigation: The website has a navigation menu with links to different sections such as Main, Menu, About Us, and Contact Us.

Header: The header section contains the restaurant logo, navigation menu, a cart icon, contact information (phone number), and a reservation button.

Main Content: The main content section includes cards highlighting features of the restaurant such as atmosphere, food quality, and affordability.

History Section: It provides information about the restaurant's history, including the origin story and some statistics.

Black Block Section: This section highlights a special offer or promotion with a call-to-action button for reservation.

Dishes Section: It showcases some of the restaurant's food items along with their images and prices.

Menu Section: Displays the restaurant's menu items with images, titles, descriptions, and order buttons.

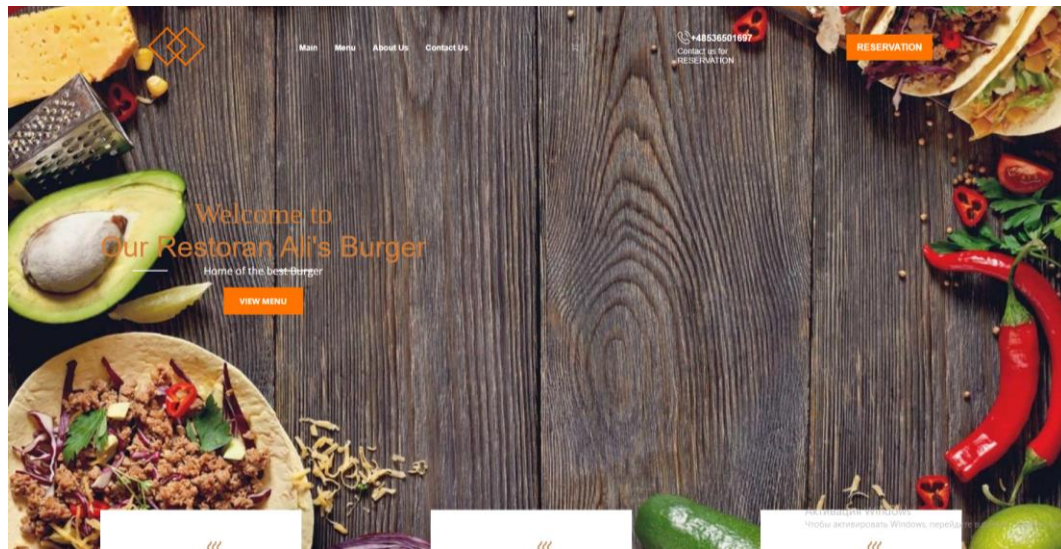

Comment Section: Shows a customer testimonial along with their name and type (visitor).

Gallery Section: Features a gallery of images showcasing various dishes offered by the restaurant.

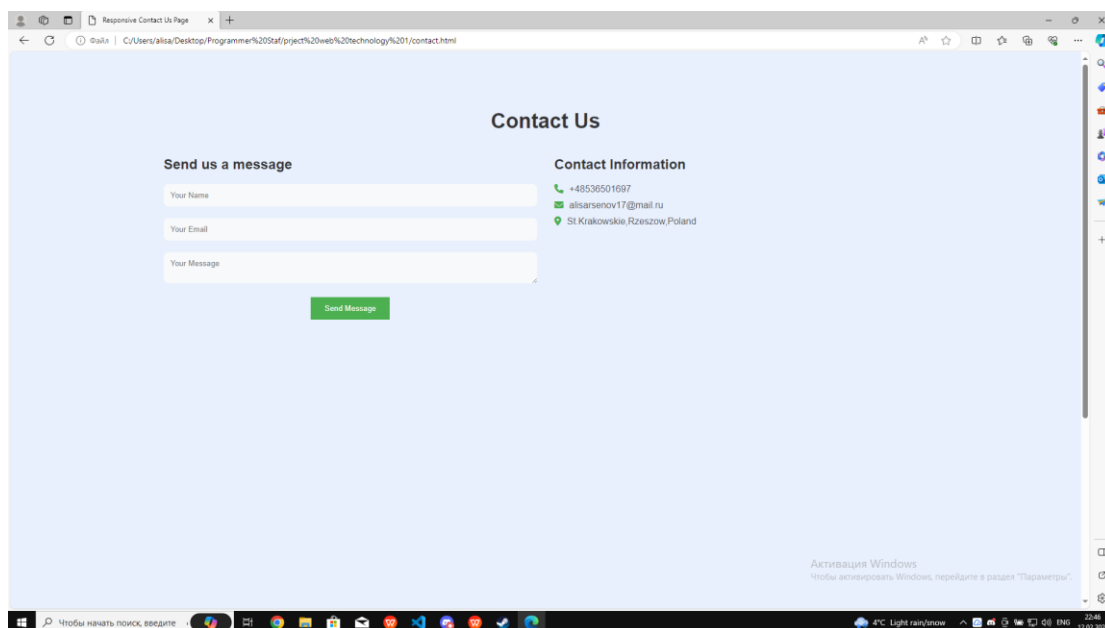

Chefs Section: Displays images of the restaurant's chefs.

Footer: Contains the restaurant's contact email.

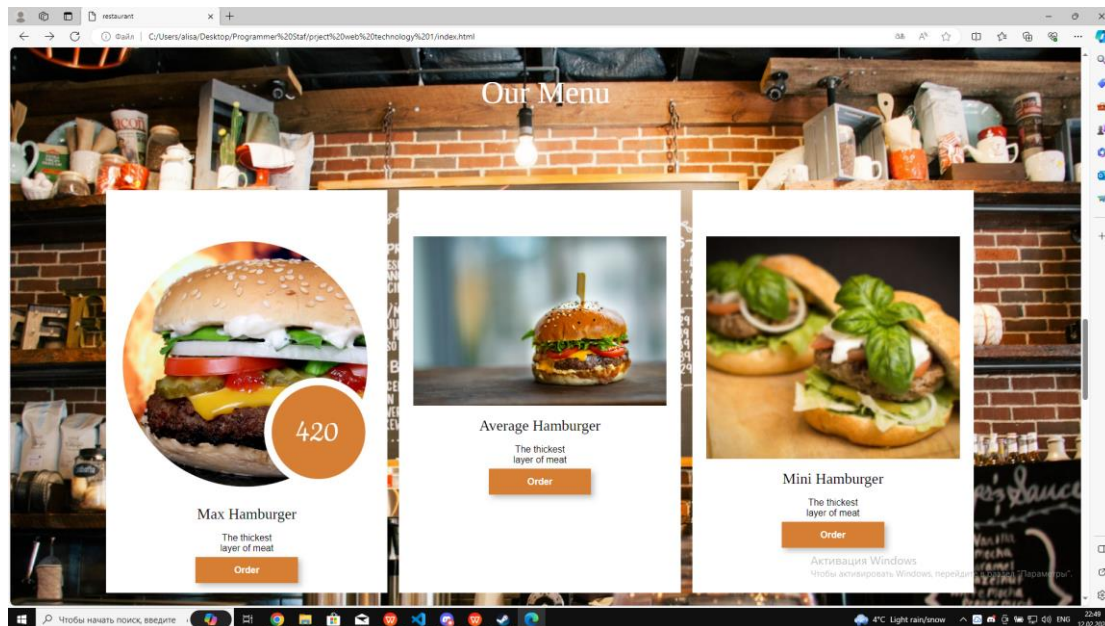

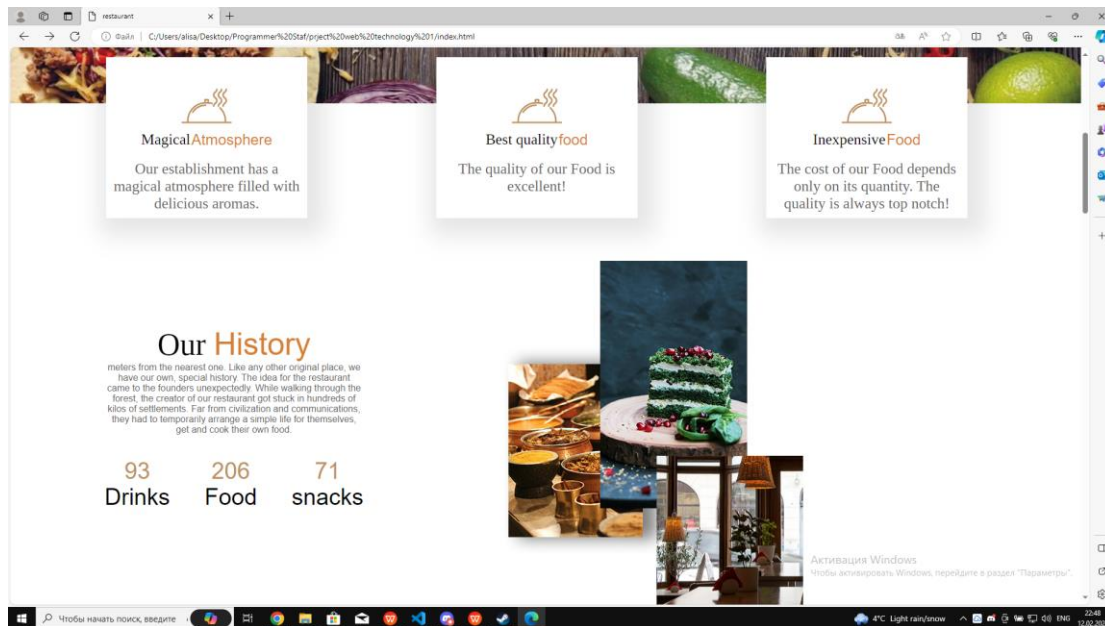

The Main Interface:

The Contact and Order Functionality:

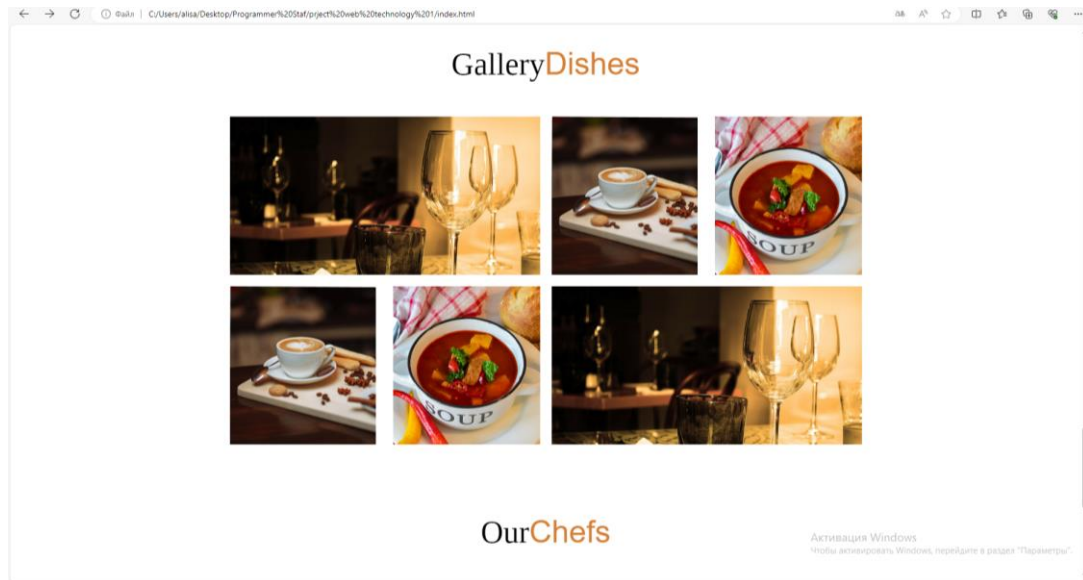

Contact Form: The website includes a contact form, allowing users to send messages directly to the restaurant's staff. The form includes fields for name, email, and message, enhancing communication and customer engagement.

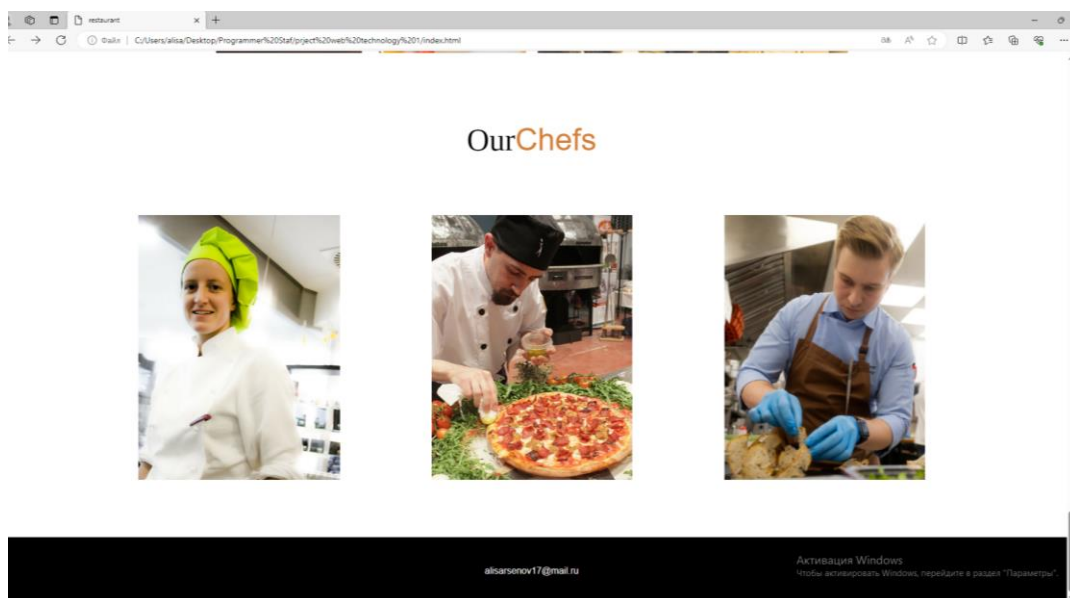

Ordering Form: The website includes an ordering system, allowing users to place orders directly through the website. The ordering form includes fields for name, phone number, and address, facilitating seamless ordering.

The last 2 interface of the website:

Gallery Section: Features a gallery of images showcasing various dishes offered by the restaurant.

Chefs Section: Displays images of the restaurant's chefs.

Footer: Contains the restaurant's contact email.

Conclusion:

The Main purpose of the website is that the users can see the profile of the restaurant and use the functions like order,contact and reservation.The application provides the convenient UI for the client.
